Customer Problem Statement :

I am	ServiceNow admin / data analyst • detail-oriented • handles bulk data	A ServiceNow administrator / data analyst (technical, detail-oriented, handles bulk data)
I'm trying to	Import spreadsheet data • use a transform map • load records in bulk	Import bulk spreadsheet (Excel/CSV) data into a ServiceNow table using a transform map
but	Manual field mapping • skipped rows • duplicate records	Field mapping is manual and import errors (skipped rows, duplicates) are hard to trace
because	Column names / formats mismatch • no data validation before import	Spreadsheet column names and formats do not match the target table fields, and data is not validated before import
which makes me feel	Frustrated • anxious • worried about data accuracy	Frustrated and anxious about data accuracy

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A ServiceNow administrator / data analyst (technical, detail-oriented, handles bulk data)	Import bulk spreadsheet (Excel/CSV) data into a ServiceNow table using a transform map	Field mapping is manual and import errors (skipped rows, duplicates) are hard to trace	Spreadsheet column names and formats do not match the target table fields, and data is not validated before import	Frustrated and anxious about data accuracy
PS-2	A business user / data entry operator (maintains records in spreadsheets, limited technical knowledge)	Load many records at once instead of entering them one by one	Wrong or duplicate records get created in the target table	No coalesce field or transform script is configured to validate and match records	Worried and not confident about data integrity
