

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	1 October 2026
Team ID	SWTID-2026-9577
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Spreadsheet Upload (Load Data)	Upload the employee Excel spreadsheet through Load Data Create the Import Set table (Employee Import) as a staging area View the loaded rows and import status
FR-2	Field Mapping (Transform Map)	Create a Transform Map from Employee Import to the Employee Test table Map Employee ID, Employee Name, Email, Department and Location Use Auto Map / Mapping Assist for matching fields
FR-3	Data Transformation	Run the transform to create records in the target table Insert new records and update existing ones Use Coalesce on Employee ID to prevent duplicates
FR-4	Validation & Verification	Review Transform History for inserted, updated and ignored counts Verify imported records in the Employee Test table Correct errors and re-run the transform if needed
FR-5	Team Overview Workspace & Reporting	Show imported employee records on the TeamOverviewWorkspaceKanban board Provide reports and dashboards on employee data

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The import uses standard ServiceNow forms and modules (Load Data, Transform Maps), so a beginner can follow it step by step.
NFR-2	Security	Only users with the required roles can load data, run transforms and view the employee records.
NFR-3	Reliability	The staging table keeps source rows separate from the target table; Coalesce prevents duplicates and failed rows can be fixed and re-run.
NFR-4	Performance	Bulk spreadsheet rows are processed in a single transform run, and results are available in Transform History right after.
NFR-5	Availability	The solution runs on the ServiceNow cloud platform and is available whenever the instance is reachable.
NFR-6	Scalability	The same Import Set and Transform Map can be reused for larger spreadsheets and future imports.
