1. INTRODUCTION

1. Project Overview

The project, **Import Data using Transform Maps (Spreadsheet)**, demonstrates a structured method for importing employee data from an Excel/CSV spreadsheet into the ServiceNow platform. The documented workflow uses ServiceNow Import Sets and Transform Maps to load spreadsheet rows into a staging table, map source fields to a target Employee table, transform the data, prevent unwanted duplicates using Coalesce, and verify the resulting records.

The project also includes validation through Import Set Rows and Transform History and presents imported employee information through a TeamOverviewWorkspaceKanban view with reporting and dashboard support.

The project documentation identifies the target flow as: spreadsheet preparation -> Data Source / Load Data -> Import Set staging table -> Transform Map -> target Employee table -> validation -> Team Overview Workspace (Kanban) and reports.

2. Purpose

- Provide a structured way to transfer spreadsheet data into the appropriate ServiceNow target table.
- Reduce repetitive manual data entry by importing multiple records in a single workflow.
- Improve data accuracy and consistency through field mapping, transformation, validation, and Coalesce conditions.
- Identify existing records and control whether records are inserted or updated, helping to reduce duplicate records.
- Provide a repeatable process for spreadsheet preparation, Import Set creation, Transform Map configuration, transformation, and target-record validation.
- Improve user efficiency and support future bulk employee-data imports.

2. IDEATION PHASE

1. Problem Statement

The supplied problem-statement document identifies two primary user problems.

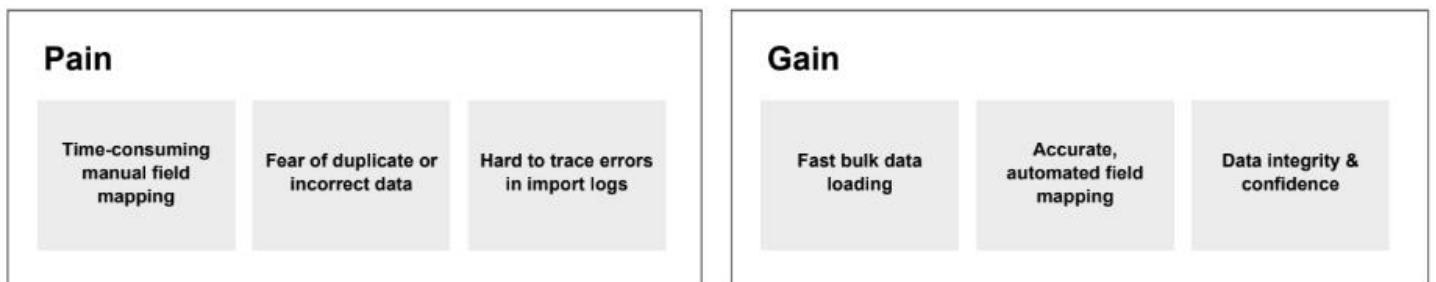

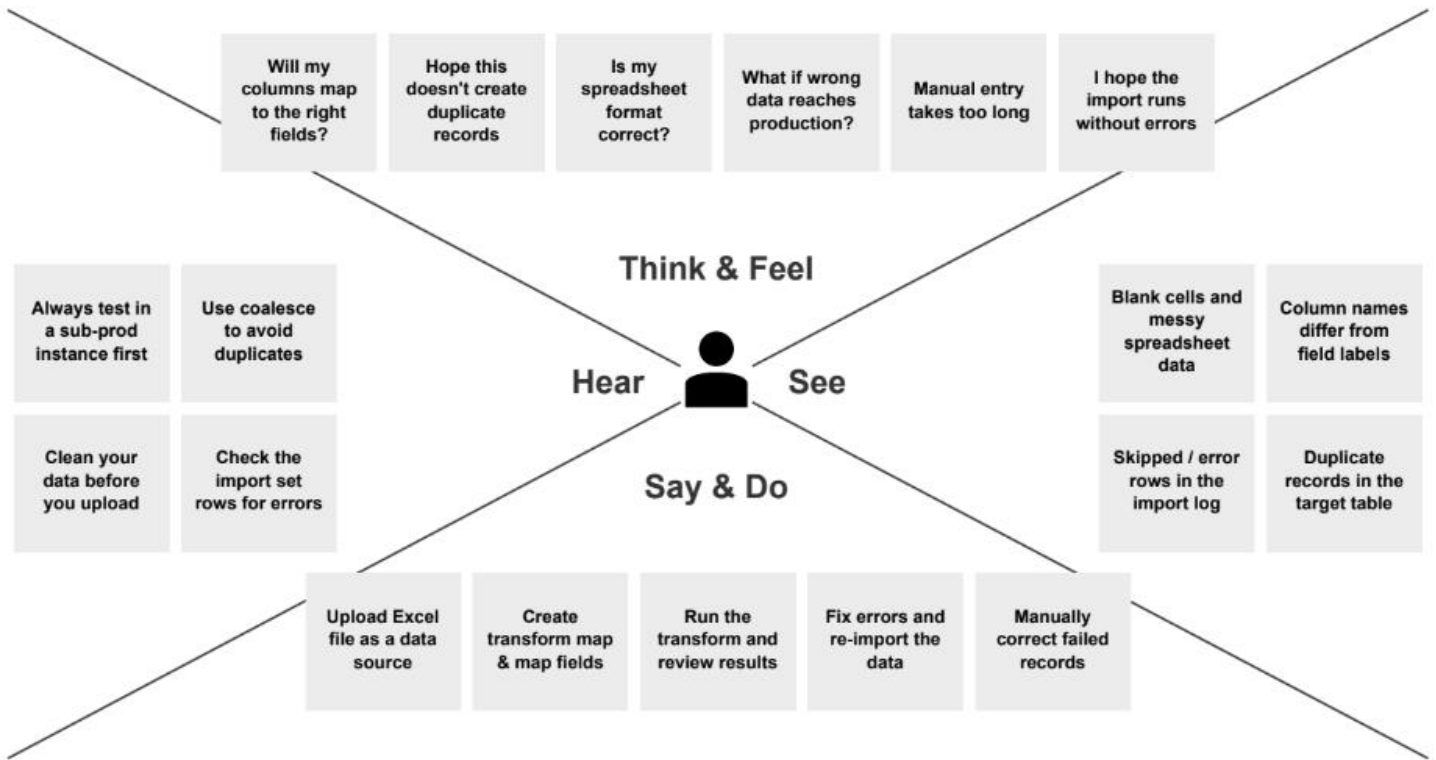

Problem	Customer	I am trying to	But	Because	Which makes me feel
PS-1	A ServiceNow administrator / data analyst handling bulk data	Import bulk spreadsheet (Excel/CSV) data into a ServiceNow table using a transform map	Field mapping is manual and import errors such as skipped rows and duplicates are hard to trace	Spreadsheet column names and formats do not match target table fields, and data is not validated before import	Frustrated and anxious about data accuracy
PS-2	A business user / data entry operator who maintains spreadsheet records and has limited technical knowledge	Load many records at once instead of entering them one by one	Wrong or duplicate records can be created in the target table	No Coalesce field or transform script is configured to validate and match records	Worried and not confident about data integrity

The selected project problem statement from the brainstorming document is: *How might we import spreadsheet data into ServiceNow quickly and accurately using transform maps, without duplicate or incorrect records?*

2.2 Empathy Map Canvas

The empathy-map document focuses on a ServiceNow administrator / data analyst importing spreadsheet data. The main concerns, observations, and actions documented are summarized below.

Think & Feel	Hear	See	Say & Do
Worries about whether columns map to the correct fields, whether duplicate records will be created, whether the spreadsheet format is correct, whether wrong data reaches production, and whether the import runs without errors.	Uses guidance from team members and existing ServiceNow documentation while checking the import process.	Sees blank cells, inconsistent column names, messy spreadsheet data, skipped/error rows, and possible duplicate records in the target table.	Cleans data, checks Import Set rows, uses Coalesce, tests in a lower environment, uploads the Excel file, creates a Transform Map, runs the transform, and fixes errors.

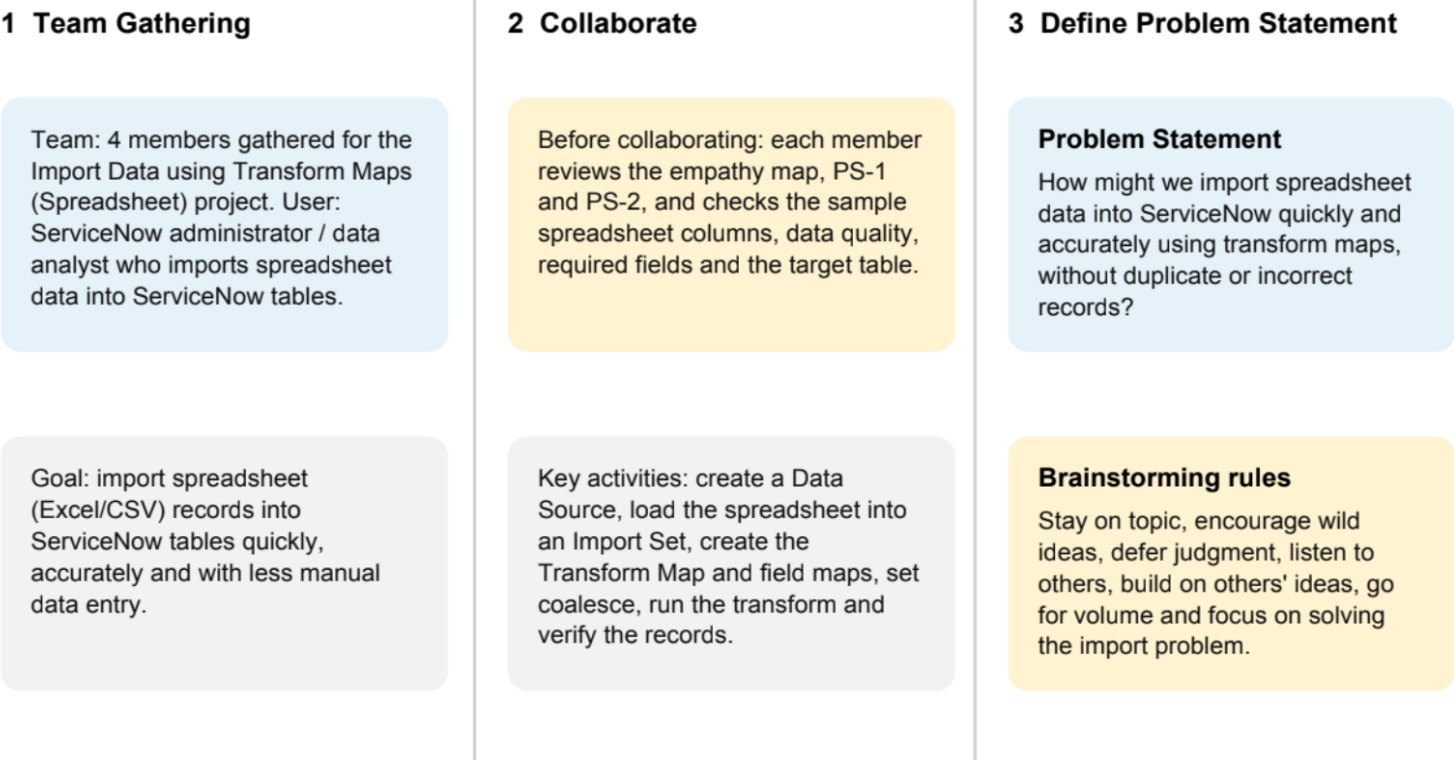

2.3 Brainstorming

The brainstorming exercise generated ideas around three main themes: preparing and validating spreadsheet data, making field mappings reusable and easier to manage, and detecting/fixing import errors safely.

Theme	Documented ideas
Pre-import quality	Remove blank rows; use a standard date format; check required fields; validate data types; perform pre-import quality check; use a standard template sheet; provide default values for blanks.
Mapping and reuse	Auto-map matching columns; preview field maps; save mappings; create reusable transform-map templates; use transform scripts for rules.
Matching and error handling	Set Coalesce on a key field; match on a unique ID; update existing records; perform duplicate checks; make import errors easy to find; highlight failed rows; retry failed records; test in a sub-production environment; import a small sample first.

The prioritization section highlights ideas such as setting Coalesce on the key field, auto-mapping matching columns, performing a pre-import quality check, using reusable Transform Maps, checking required fields, and testing in a sub-production environment.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Step-2: Brainstorm, Idea Listing and Grouping

2

Brainstorm

Write down any ideas that come to mind that address your problem statement.

🕒 10 minutes

TIP

You can select a sticky note and hit the pencil [switch to sketch] icon to start drawing!

Person 1			Person 2			Person 3			Person 4		
Remove blank rows	Pre-import quality check	Reusable transform maps	Standard date format	Use a standard template sheet	Auto-map matching columns	Check required fields	Field map preview	Transform scripts for rules	Validate data types	Save mapping templates	Match on unique ID
Update existing records	Highlight failed rows	Import small sample	Default values for blanks	Duplicate check report	Retry failed records	Set coalesce on key field	Skip identical rows	Download error report	Merge old duplicates	Clear import error log	Test in sub-prod first

3

Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. In the last 10 minutes, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

🕒 20 minutes

TIP

Add customizable tags to sticky notes to make it easier to find, browse, organize, and categorize important ideas as themes within your mural.

Clean, validate and standardize spreadsheet data before import		Auto-suggest and reuse field mappings in transform maps		Use coalesce to update instead of duplicating records		Make import errors easy to find and fix, and test safely	
Remove blank rows	Standard date format	Auto-map matching columns	Field map preview	Set coalesce on key field	Match on unique ID	Clear import error log	Highlight failed rows
Check required fields	Validate data types	Save mapping templates	Reusable transform maps	Update existing records	Duplicate check report	Retry failed records	Download error report
Pre-import quality check	Use a standard template sheet	Default values for blanks	Transform scripts for rules	Skip identical rows	Merge old duplicates	Test in sub-prod first	Import small sample

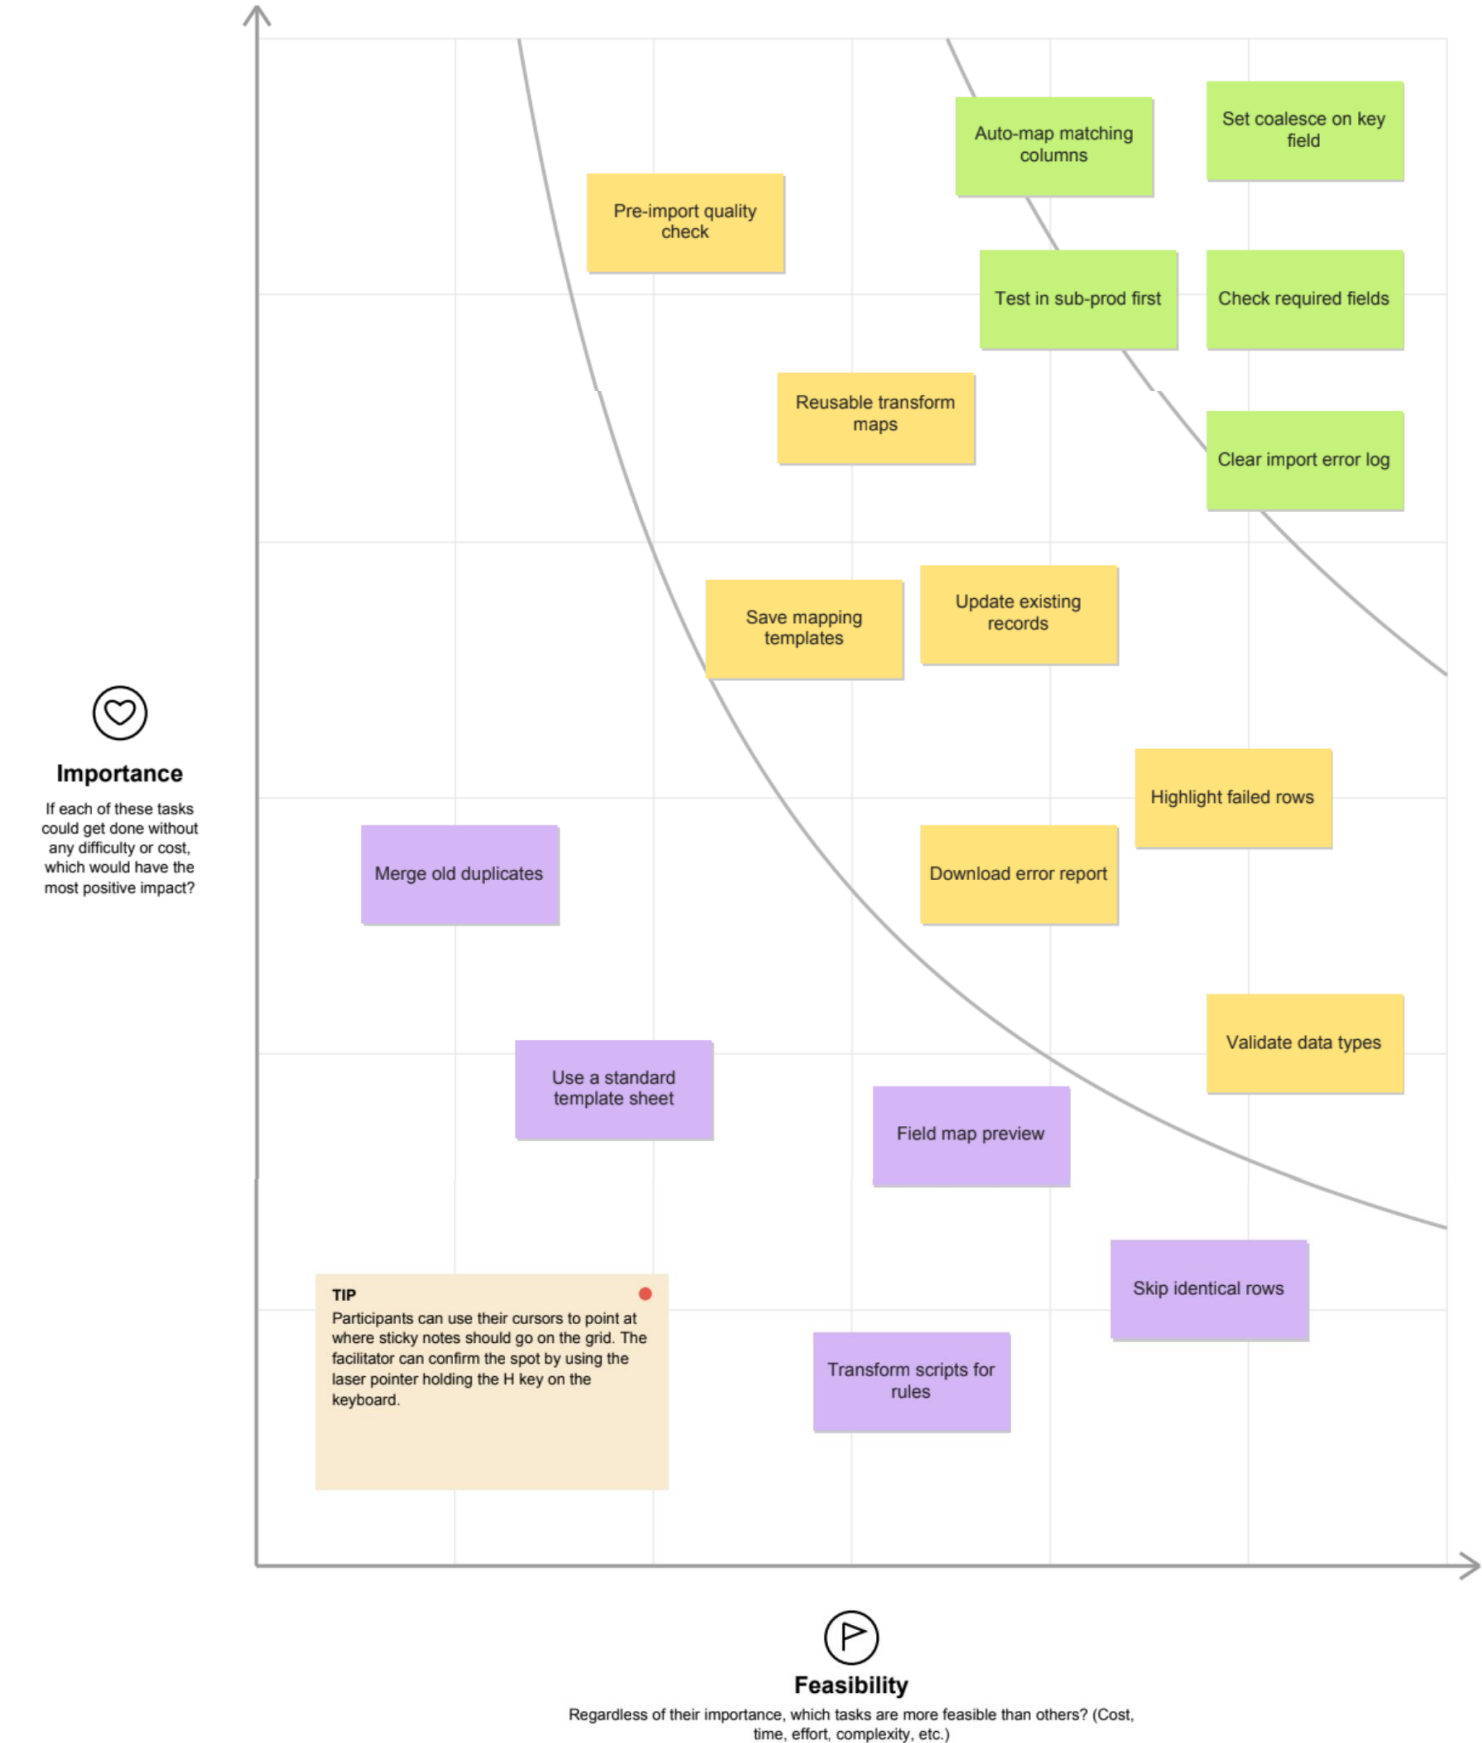

Step-3: Idea Prioritization

4

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

20 minutes

3. REQUIREMENT ANALYSIS

1. Customer Journey Map

The customer journey describes the employee-data import experience from receiving the spreadsheet through reuse of the same workflow for the next import.

Stage	Experience / action	Key interaction
Entice	Receive employee spreadsheet and recognize that manual entry is slow and error-prone.	Excel spreadsheet; HR/team contact.
Enter	Plan the import, log in to ServiceNow, open System Import Sets > Load Data, select the Excel file, and create the Import Set.	ServiceNow web UI; Load Data module; Import Set table.
Engage	Review staged rows, create Transform Map, map Employee ID/Name/Email/Department/Location, set Employee ID as the matching key, and run the transform.	Import Set Rows; Transform Map; Field Map / Mapping Assist; Coalesce.
Exit	Review transform history, verify the Employee Test target records, and fix/re-run if required.	Transform History; Employee Test table.
Extend	Show employee records on the Team Overview Workspace, build reports/dashboards, and reuse the workflow for the next spreadsheet.	TeamOverviewWorkspaceKanban; reports; dashboards.

3.2 Solution Requirement

Functional requirements documented for the solution are:

FR	Requirement	Key details
FR-1	Spreadsheet Upload (Load Data)	Upload employee Excel spreadsheet; create Employee Import staging table; view loaded rows and import status.
FR-2	Field Mapping (Transform Map)	Create Transform Map from Employee Import to Employee Test; map Employee ID, Employee Name, Email, Department and Location; use Auto Map / Mapping Assist.
FR-3	Data Transformation	Run transform; insert new records and update existing records; use Coalesce on Employee ID to prevent duplicates.
FR-4	Validation & Verification	Review Transform History counts; verify Employee Test records; correct errors and re-run when needed.
FR-5	Team Overview Workspace & Reporting	Show imported employee records on TeamOverviewWorkspaceKanban and provide reports/dashboards.

Non-functional requirements:

NFR	Requirement	Description
NFR-1	Usability	Standard ServiceNow forms and modules allow a step-by-step import process.
NFR-2	Security	Only users with required roles can load data, run transforms and view employee records.
NFR-3	Reliability	Staging separates source rows from target data; Coalesce helps prevent duplicates; failed rows can be fixed and re-run.
NFR-4	Performance	Bulk spreadsheet rows are processed in a transform run and results are available in Transform History.
NFR-5	Availability	The solution runs on ServiceNow cloud infrastructure whenever the instance is reachable.
NFR-6	Scalability	The same Import Set and Transform Map can be reused for larger spreadsheets and future imports.

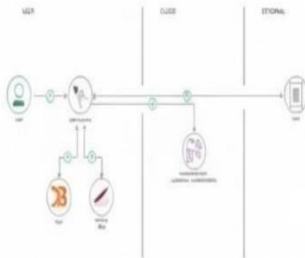

3.3 Data Flow Diagram

The documented data flow describes how spreadsheet data enters ServiceNow, moves through the Import Set staging table, is mapped and transformed using a Transform Map, and is finally stored and validated in the target table.

Example: (Simplified)

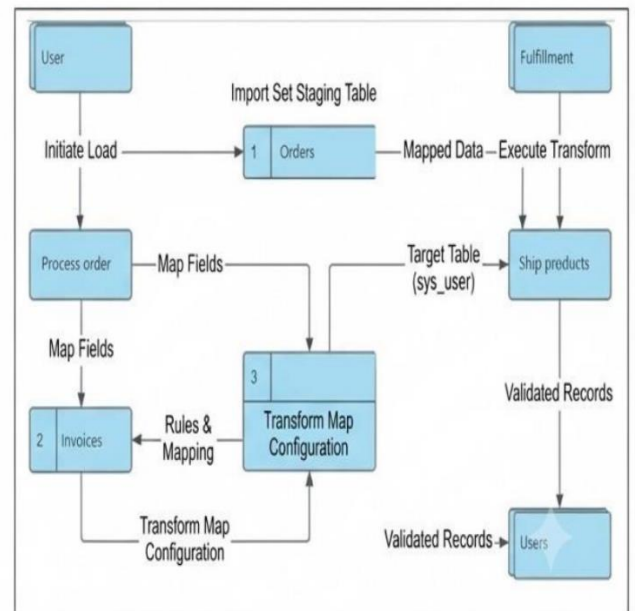

Flow

1-5

1. User prepares an Excel spreadsheet with employee data.
2. User logs into ServiceNow and initiates "Load Data".
3. Spreadsheet data is loaded into a temporary Import Set Table (staging).
4. User configures a Transform Map to map staging fields to target fields (e.g., 'u_name' to 'name').
5. Transform Map is executed, creating validated records in the final User (sys_user) Table.

Example: DFD Level 0 (Industry Standard)

Blue Rounded Rectangles: ServiceNow Components/Processes; White Boxes: Data Tables; Arrows: Data/Control Flow

Figure 1: Source DFD page supplied with the project documentation.

The simplified flow in the supplied document is: (1) user prepares the Excel spreadsheet with employee data; (2) user logs into ServiceNow and initiates Load Data; (3) spreadsheet data is loaded into the Import Set staging table; (4) user configures a Transform Map to map staging fields to target fields; and (5) the Transform Map is executed to create validated records in the target Employee table.

User Stories & Functional Requirements

The table below outlines the user stories, functional requirements, acceptance criteria, priorities, and release cycles for importing spreadsheet data into ServiceNow using Import Sets and Transform Maps.

User Type	Functional Requirement (Epic)	USN	User Story / Task	Acceptance Criteria	Priority	Release
Administrator	Data Source Setup	USN-1	As an admin, I can create a spreadsheet to organize the required data for importing into ServiceNow.	Spreadsheet is created with the required fields and valid data in the correct format.	Medium	Sprint-1
Administrator	Data Source Setup	USN-2	As an admin, I can create tables to store and organize the required data in ServiceNow.	Required tables are created with appropriate fields to store the imported data.	Medium	Sprint-1
Administrator	Import Set Configuration	USN-3	As an admin, I can create an Import Set table to temporarily store and manage the imported spreadsheet data in ServiceNow.	Import Set table is created and imported spreadsheet rows are stored successfully.	Medium	Sprint-2
Administrator	Import Set Configuration	USN-4	As an admin, I can create a Transform Map to map the imported data from the Import Set table to the target table.	Transform Map is created and source fields are correctly mapped to target fields.	Medium	Sprint-2
Administrator	Data Transformation & Execution	USN-5	As an admin, I can transform the imported data and validate the mapped records to ensure the data is correctly loaded into ServiceNow.	Transformation completes successfully and the mapped records are correctly loaded into the target table.	Medium	Sprint-3
Administrator	Data Transformation & Execution	USN-6	As an admin, I can enable Coalesce to identify matching records and prevent duplicate records from being created during data import.	Coalesce identifies matching records and prevents duplicate records during transformation.	Medium	Sprint-3
Administrator	Data Transformation & Execution	USN-7	As an admin, I can insert new data in Excel format to prepare additional records for import into ServiceNow.	New Excel data is prepared in the required format and can be imported successfully.	Medium	Sprint-3
Administrator	Validation & Testing	USN-8	As an administrator, I can review transformation errors and correct invalid source data.	Transformation errors are identified, invalid source data is corrected, and the data can be transformed successfully.	Medium	Sprint-4
Administrator	Validation & Testing	USN-9	As an administrator, I can test new records, updates, and duplicate prevention.	New records are inserted, existing records are updated correctly, and duplicate records are prevented.	Medium	Sprint-4

Backlog and Release Summary

Sprint	User Stories	Story Points
Sprint-1	USN-1, USN-2	3
Sprint-2	USN-3, USN-4	4
Sprint-3	USN-5, USN-6, USN-7	5
Sprint-4	USN-8, USN-9	4
Total	9 User Stories	16

3.4 Technology Stack

Component	Technology / implementation
User Interface	ServiceNow Next Experience UI, Workspace (UI Builder), HTML, CSS, JavaScript.
Application Logic - Import	ServiceNow Import Sets, Transform Maps and Field Maps.
Application Logic - Transformation	Server-side JavaScript, Transform Scripts, Glide API; Coalesce and field transformations.
Application Logic - Workspace	Visual Task Board / Workspace Kanban and UI Builder.
Database	ServiceNow relational tables; Import Set staging table and target employee table.
Cloud Database / Infrastructure	ServiceNow Cloud / Personal Developer Instance (PDI).
File Storage	ServiceNow Attachments (sys_attachment) for the Excel file on the Data Source record.
External APIs	Not used; spreadsheet is loaded manually. REST Table API is listed as optional in the source document.
Machine Learning	Not used in this project.

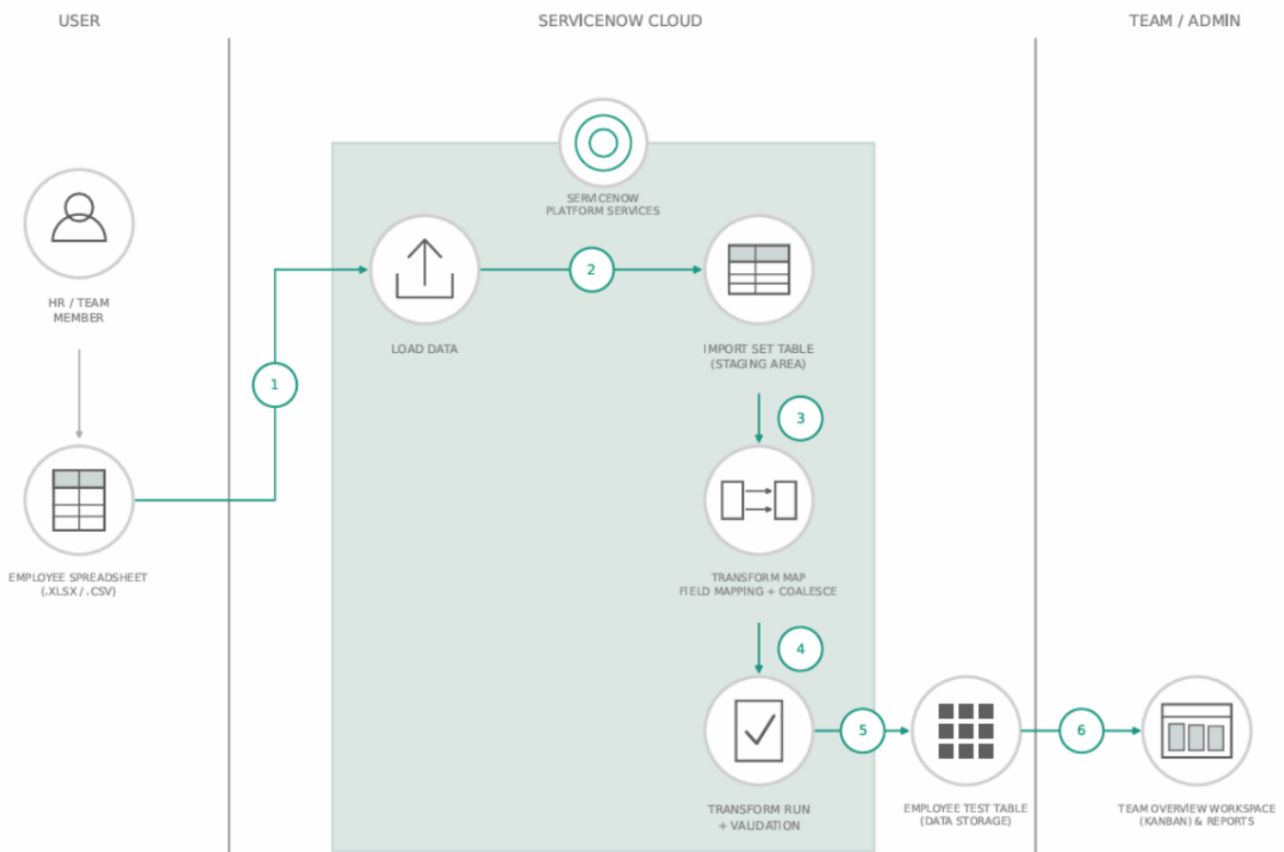

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1	User Interface	How the user interacts with the application: ServiceNow platform UI for loading data and a Kanban-style team overview in a workspace.	ServiceNow Next Experience UI, Workspace (UI Builder), HTML, CSS, JavaScript
2	Application Logic-1	Import Set and Transform Map: loads spreadsheet rows into the staging table and maps source fields to target table fields.	ServiceNow Import Sets, Transform Maps, Field Maps
3	Application Logic-2	Data cleansing and validation during transformation (coalesce on a unique field, field transformations, onBefore / onAfter scripts).	Server-side JavaScript (Transform Scripts, Glide API)
4	Application Logic-3	Kanban view of the imported team data, grouped by a status / team field for a team overview.	Visual Task Board / Workspace Kanban, UI Builder
5	Database	Import Set (staging) table holds raw spreadsheet data; the target table holds the final employee records.	ServiceNow relational tables (u_import set table, sys_user / custom table)
6	Cloud Database	Database service hosted on the cloud, managed by the ServiceNow platform.	ServiceNow Cloud Instance (Personal Developer Instance)
7	File Storage	The Excel file is stored as an attachment on the Data Source record.	ServiceNow Attachments (sys_attachment)
8	External API-1	Not used. The data is loaded manually from a spreadsheet file.	N/A (optionally REST Table API)
9	External API-2	Not used.	N/A
10	Machine Learning Model	Not used in this project.	N/A
11	Infrastructure (Server / Cloud)	Application deployment on cloud. Local Server Configuration: not applicable. Cloud Server Configuration: ServiceNow PDI (developer.servicenow.com), browser access.	ServiceNow Cloud (PDI)

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1	Open-Source Frameworks	Open-source frameworks used. The project mainly uses the ServiceNow low-code platform; standard web technologies are used for the UI.	JavaScript (Rhino engine in ServiceNow), HTML, CSS
2	Security Implementations	Access to import tables, transform maps and target data is restricted by roles; data is transferred over encrypted connections.	Role-based ACLs, IAM / user roles, HTTPS (TLS), Data policies
3	Scalable Architecture	Multi-tier architecture: UI tier, application tier (Import Set / Transform Map) and database tier. Staging tables allow large bulk imports to be processed in batches.	ServiceNow multi-tier cloud platform
4	Availability	Hosted on ServiceNow cloud infrastructure, which provides managed hosting, backups and failover.	ServiceNow Cloud (managed instance)

S.No	Characteristics	Description	Technology
5	Performance	Bulk data is loaded into a staging table first, then transformed in one run; coalesce prevents duplicate records and keeps imports efficient.	Import Set staging table, Transform Map coalesce, indexed fields

4. PROJECT DESIGN

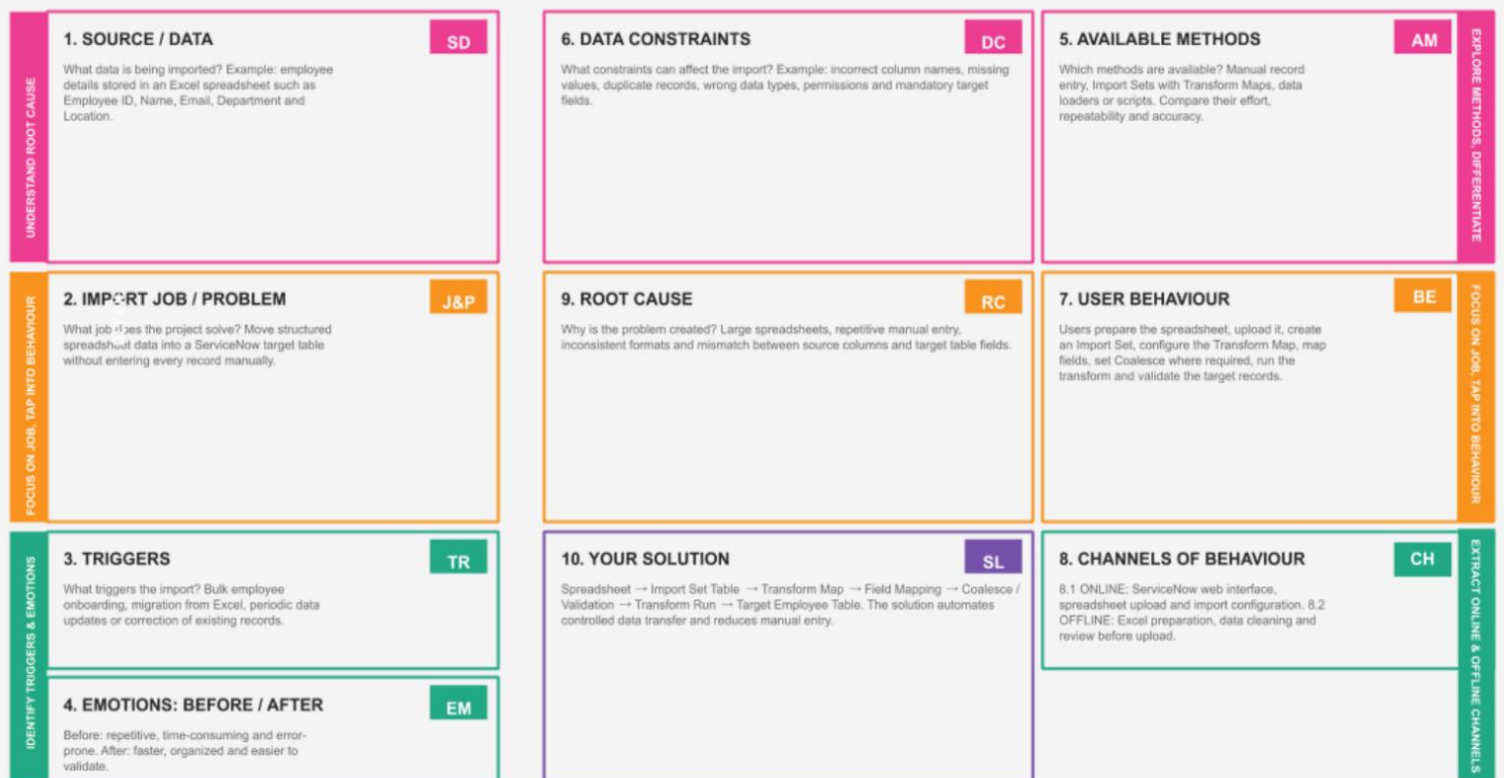

1. Problem Solution Fit

The documented Problem-Solution Fit connects the user's spreadsheet-import problems with a structured ServiceNow workflow. Import Sets and Transform Maps are used to transfer, map, validate, and manage spreadsheet data while reducing manual entry and improving consistency.

- Transfer spreadsheet data into the appropriate ServiceNow target table through a structured import process.
- Reduce manual work by importing multiple records instead of entering each record individually.
- Improve accuracy and consistency through field mapping, transformation rules, validation and Coalesce conditions.
- Identify existing records and control insert/update behavior to reduce duplicate and incorrect records.
- Use a systematic workflow covering spreadsheet preparation, Import Set creation, Transform Map configuration, field mapping, transformation and validation.
- Provide a repeatable method for bulk employee-data imports.

Import Data using Transform Maps— Spreadsheet

Purpose / Vision: Import spreadsheet data accurately into ServiceNow target tables

4.2 Proposed Solution

The proposed solution uses a ServiceNow Import Set and Transform Map to transfer spreadsheet data into the target Employee table. The documented workflow is:

1. Prepare the employee Excel/CSV spreadsheet.
2. Attach/select the spreadsheet through the ServiceNow Data Source / Load Data process.
3. Load the spreadsheet into the Employee Import staging table.
4. Review the staged rows and import status.
5. Create a Transform Map linking Employee Import to Employee Test.
6. Map Employee ID, Employee Name, Email, Department and Location using field maps or Mapping Assist.
7. Configure Coalesce using Employee ID as the unique matching field.
8. Run the transformation so new records are inserted and matching records are updated.
9. Review Transform History and verify records in the target table.
10. Show the imported employee data in the TeamOverviewWorkspaceKanban and use reports/dashboards.

4.3 Solution Architecture

The architecture supplied with the project places the spreadsheet on the external-source side and the ServiceNow cloud instance on the platform side. The main platform components are Load Data, Import Set Table, Transform Map, Target Table and Team Overview Workspace (Kanban) + Reports.

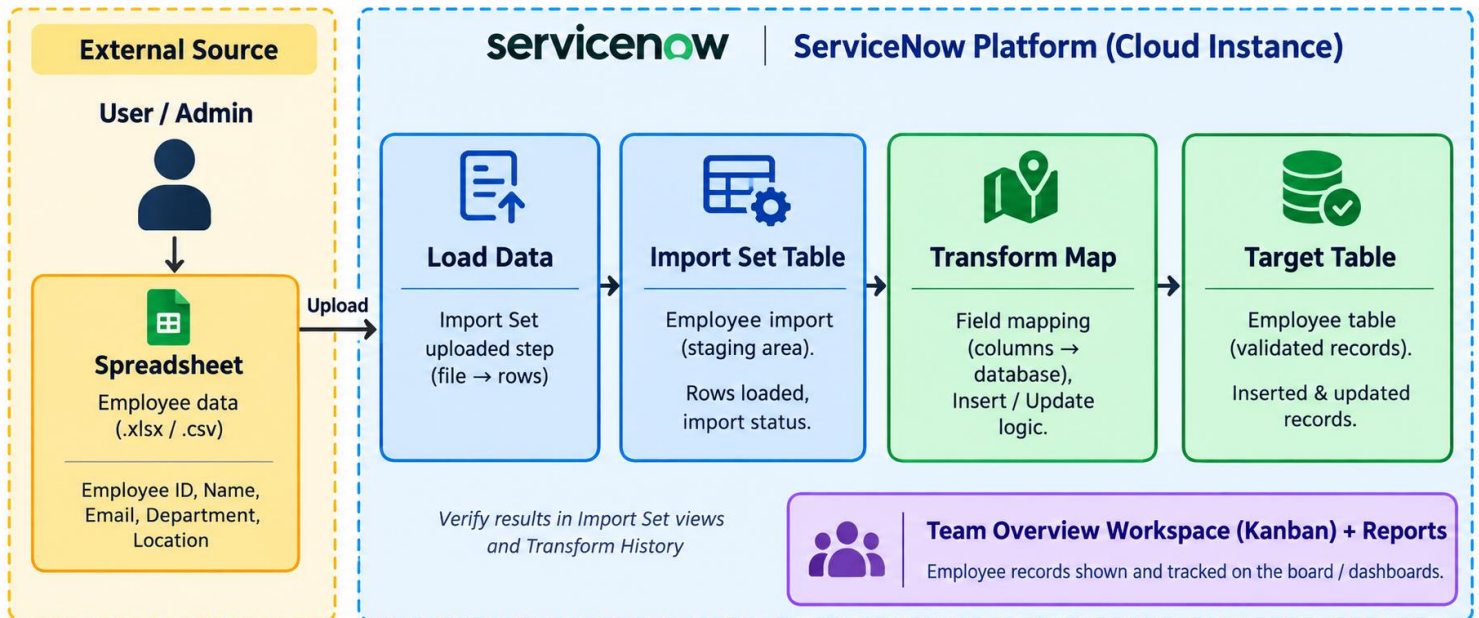

Figure 2: Solution architecture supplied with the project documentation.

5. PROJECT PLANNING & SCHEDULING

1. Project Planning

The project planning document defines four one-day sprints, nine user stories and 16 story points.

Sprint	Epic	User Stories	Points	Date
Sprint-1	Data Source Setup	USN-1, USN-2	3	28 Sep 2026
Sprint-2	Import Set Configuration	USN-3, USN-4	4	29 Sep 2026
Sprint-3	Data Transformation & Execution	USN-5, USN-6, USN-7	5	30 Sep 2026
Sprint-4	Validation & Testing	USN-8, USN-9	4	01 Oct 2026

The four sprints total 16 story points. The planning document states that all 16 points were completed, giving an average velocity of 4 story points per sprint ($16 / 4$).

User-story allocation documented in the planning file includes the team members Dharashini T, Anupriya S, Nivetha V and Priya P. The source material should be used as the authoritative record for the submitted team's allocation.

Project tracker summary:

Sprint	Total Points	Planned End	Completed	Actual Release
Sprint-1	3	28 Sep 2026	3	28 Sep 2026
Sprint-2	4	29 Sep 2026	4	29 Sep 2026
Sprint-3	5	30 Sep 2026	5	30 Sep 2026
Sprint-4	4	01 Oct 2026	4	01 Oct 2026

Burndown summary: the supplied planning document describes a starting workload of 16 story points and a remaining workload of 0 after Sprint-4.

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Data Source Setup	USN-1	As an admin, I can create a spreadsheet to organize the required data for importing into ServiceNow.	2	Medium	Dharashini T
Sprint-1	Data Source Setup	USN-2	As an admin, I can create tables to store and organize the required data in ServiceNow.	1	Medium	Anupriya S
Sprint-2	Import Set Configuration	USN-3	As an admin, I can create an Import Set table to temporarily store and manage the imported spreadsheet data in ServiceNow.	2	Medium	Nivetha V
Sprint-2	Import Set Configuration	USN-4	As an admin, I can create a Transform Map to map the imported data from the Import Set table to the target table.	2	Medium	Priya P
Sprint-3	Data Transformation & Execution	USN-5	As an admin, I can transform the imported data and validate the mapped records to ensure the data is correctly loaded into ServiceNow.	1	Medium	Dharashini T
Sprint-3	Data Transformation & Execution	USN-6	As an admin, I can enable Coalesce to identify matching records and prevent duplicate records from being created during data import.	2	Medium	Anupriya S
Sprint-3	Data Transformation & Execution	USN-7	As an admin, I can insert new data in Excel format to prepare additional records for import into ServiceNow.	2	Medium	Priya P
Sprint-4	Validation & Testing	USN-8	As an administrator, I can review transformation errors and correct invalid source data.	2	Medium	Nivetha V
Sprint-4	Validation & Testing	USN-9	As an administrator, I can test new records, updates, and duplicate prevention.	2	Medium	Nivetha V

Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	3	1 Day	28 Sep 2026	28 Sep 2026	3	28 Sep 2026
Sprint-2	4	1 Day	29 Sep 2026	29 Sep 2026	4	29 Sep 2026
Sprint-3	5	1 Day	30 Sep 2026	30 Sep 2026	5	30 Sep 2026
Sprint-4	4	1 Day	01 Oct 2026	01 Oct 2026	4	01 Oct 2026

Velocity:

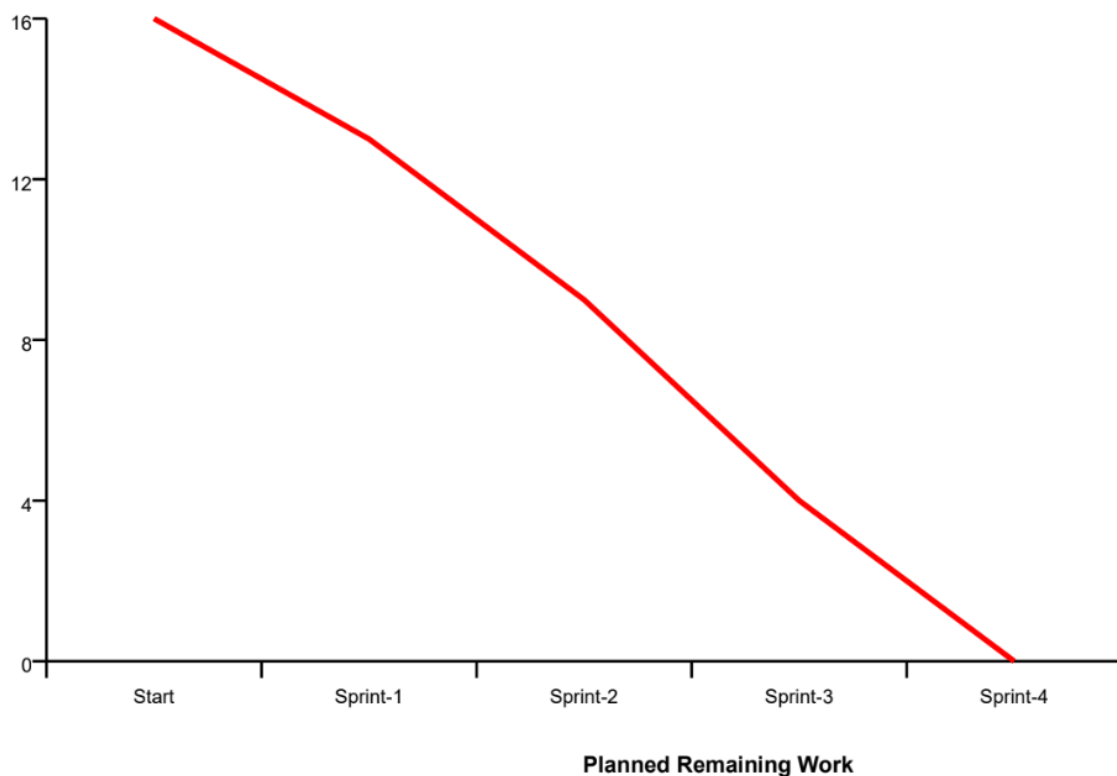

The project was completed from 28 September 2026 to 1 October 2026. The four sprint phases contain 16 story points in total, and all 16 points were completed.

Total Story Points	Number of Sprints	Average Velocity
16	4	4 story points / sprint

Average Velocity (AV) = Total Story Points Completed / Number of Sprints = 16 / 4 = 4 story points per sprint.

Burndown Chart:

A burndown chart is a graphical representation of work left to do versus time. For this project, the chart starts with 16 story points and reaches 0 after Sprint-4.

Stage	Remaining Story Points
Project Start	16
After Sprint-1	13
After Sprint-2	9
After Sprint-3	4
After Sprint-4 / Project Completion	0

Project Completion Summary

Project	Import Data Using Transform Maps (Spreadsheet)
Project Duration	28 September 2026 – 1 October 2026 (4 Days)
Total User Stories	9
Total Story Points	16
Completed Story Points	16
Average Velocity	4 story points per sprint
Final Remaining Work	0 story points

6. FUNCTIONAL AND PERFORMANCE TESTING

1. Performance Testing

The supplied UAT report covers the functional validation of the import workflow. The testing environment is a ServiceNow Personal Developer Instance (PDI) / Training Instance. The testing period recorded in the UAT report is one day and the project version is 1.0.

The source requirements also identify performance as a non-functional requirement: bulk spreadsheet rows are processed through the Import Set staging table and transform run, with results available in Transform History after processing.

Test ID	Scenario	Expected result	Actual result	Status
TC-001	Prepare spreadsheet data	Spreadsheet contains required columns and valid data.	Spreadsheet prepared successfully.	PASS
TC-002	Load spreadsheet into Import Set	Spreadsheet uploaded and Import Set created.	Uploaded successfully; Import Set created.	PASS
TC-003	Verify imported rows	Imported rows match source spreadsheet.	Rows checked and matched source data.	PASS
TC-004	Create Transform Map	Transform Map created correctly.	Created with required source and target tables.	PASS
TC-005	Create field mappings	Required fields mapped correctly.	Spreadsheet fields mapped to corresponding target fields.	PASS
TC-006	Enable Coalesce	Existing records identified using selected unique value.	Coalesce configured on selected unique field.	PASS
TC-007	Transform data	Valid rows inserted or updated in target table.	Transformation completed successfully; expected target records created/updated.	PASS

UAT result summary: all seven documented test cases are marked PASS. The UAT report states that no project-specific bugs were identified during the completed testing.

For security, credentials are not included in the UAT report.

Space for testing/output evidence screenshots: The following screenshots should be pasted from the actual ServiceNow instance if required by the evaluator.

Figure 12 - TeamOverviewWorkspaceKanban / dashboard

8. ADVANTAGES & DISADVANTAGES

Advantages	Disadvantages / limitations
Reduces repetitive manual data entry for bulk employee records.	The workflow depends on correctly prepared spreadsheet data and correct field mappings.
Provides a structured staging-and-transformation workflow.	Incorrect source formats or missing values may require correction and re-running the transform.
Field mapping and Coalesce support consistent record matching and update behavior.	Users require the appropriate ServiceNow roles to load data, run transforms and access target records.
Transform History provides a place to review transformation outcomes and errors.	The supplied project does not document external API-based automated file ingestion; spreadsheet loading is manual.
The same Import Set / Transform Map approach can be reused for future spreadsheets and larger imports.	Actual performance at larger data volumes is not quantified in the supplied UAT report.
The workflow can feed the TeamOverviewWorkspaceKanban and reporting layer.	Output screenshots from the live ServiceNow instance still need to be pasted into the final report.

9. CONCLUSION

The project demonstrates a structured ServiceNow workflow for importing employee data from a spreadsheet using Import Sets and Transform Maps. The documented process moves data through a staging table, applies field mappings, uses Coalesce to identify matching records, performs the transformation, and verifies the resulting records in the target table.

The project requirements cover spreadsheet upload, field mapping, transformation, validation, workspace reporting, usability, security, reliability, performance, availability and scalability. The planning documentation records four sprints with 16 story points, and the UAT report records seven functional test cases, all marked PASS.

Based on the supplied documents, the project provides a repeatable approach for bulk employee-data import and validation within ServiceNow. The final submitted version should include the team's actual ServiceNow screenshots in Section 7 and replace any institution-specific placeholders or links required by the evaluator.

10. FUTURE SCOPE

- Reuse the same Import Set and Transform Map pattern for different spreadsheets, source tables and target tables.
- Add more field mappings, validation rules and Coalesce conditions as requirements grow.
- Extend the workflow to support employee onboarding, master-data migration and periodic spreadsheet updates.
- Add stronger data-quality checks before import, including required-field validation, data-type validation and standard templates.
- Expand the TeamOverviewWorkspaceKanban and reporting layer for richer employee-data monitoring.
- Introduce automated or scheduled ingestion in future versions if an external integration method is required; the current project documentation describes spreadsheet loading as manual.
- Add additional testing with larger datasets to quantify processing time and scalability.

11. APPENDIX

Dataset Link

The supplied documents describe an Excel/CSV employee dataset.
